## what we saw today

☐

### Biopsy

*A sample of tissue taken from the mouth region in order to examine it more closely. (All biopsies are sent off to a pathologist for testing and examination.)*

☐

### Frenectomy

*Tissue may need to be removed to help with space closure and closure retention following orthodontic treatment*

☐

### Implants

*A great option if you have had teeth pulled or are missing teeth to prevent bone loss and prevent any further damage such as potential jawbone deterioration.*

☐

### IV Sedation

*Serves to reduce anxiety and sometimes pain for specific patients or treatment techniques by administering a sedative intravenously combined with nitrous oxide (laughing gas)*

☐

### Surgical & Wisdom Tooth Extractions

*Tooth removal due to various causes such as tooth disease or gum disease, dental trauma or tooth crowding.*
